

# Prof. Dr. Gerrit Borchard (AK Kreuter)

## **Topic of dissertation**

Examination of interactions between colloidal drug carrier systems (nanoparticles) with the reticulo-endothelial system in rats: determination of factors influencing body distribution

## **Date of thesis defense**

January 27, 1994

## **Organisation**

Ecole de Pharmacie Genève-Lausanne, Laboratoire de Pharmacie Galénique et Biopharmacie, Université de Genève, Geneva, Switzerland

## **Position**

Full Professor, Biopharmaceutical Sciences; Research Focus: Molecular Biopharmaceutics

## **Statement**

"My graduate studies under the supervision of Jörg Kreuter have determined my career in two aspects. On one hand, I was introduced to a field of research, the description of interactions between biological systems and drug carrier systems, which still fascinates me.

On the other hand, I was given the opportunity to work, already as a graduate student, in an international and interdisciplinary environment. The thus obtained experience and the contacts I made have both formed my attitude towards science as well as prepared me for successive endeavours, which I am very thankful for."
